# **Qatar increases investment in solar energy storage**

## Overview

---

Qatar aims to produce 20 percent of its electricity from renewable sources by 2030, reduce greenhouse gas emissions by 25 percent, and invest in solar energy storage and grid integration, as outlined in the Second National Development Strategy (2018-2022) and the National Environment and Climate Change Strategy (2021-2030). What is qatarenergy's future solar project?

QatarEnergy's future solar projects, with a production capacity of 875 megawatts, reflect the state's commitment to effectively utilizing centralized renewable energy projects. These initiatives are crucial for achieving the goals outlined in the National Renewable Energy Strategy.

Will Qatar achieve 20 percent solar power by 2030?

By 2030, Qatar has set the goal of attaining 20% of its energy from solar power. The country is well-positioned to capitalize on photovoltaic systems, as it has a global horizontal irradiance value of approximately 2,140 kWh per square meter annually.

How will Qatar's Solar energy industry evolve in the near future?

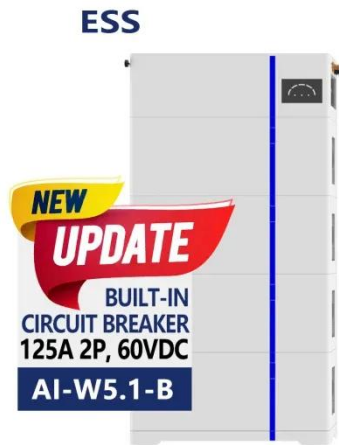

The various milestones in the technological innovations associated with Qatar's solar energy industry are likely to accelerate the market in the near future. The renewables-based power generation in the country was around 43MW, as of 2020, which is almost negligible as compared to the fossil fuels penetration (13099MW).

Why is Qatar a good location for solar energy projects?

Qatar's high solar irradiance levels make it an ideal location for solar energy projects. The country enjoys a global horizontal irradiance among the highest in the world, averaging over 2,000 kilowatt-hours per square meter annually.

## Qatar increases investment in solar energy storage
