

**EQACC SOLAR**

# **Requirements and standards for energy storage boxes in battery swap stations**

## Overview

---

What are the safety requirements for a battery swap system?

IEC 62840-2:2025 provides the safety requirements for a battery swap system, for the purposes of swapping swappable battery system (SBS)/handheld-swappable battery system (HBS) of electric vehicles. The battery swap system is intended to be connected to the supply network.

What is a battery swap system?

The battery swap system is intended to be connected to the supply network. The power supply is up to 1 000 V AC or up to 1 500 V DC in accordance with IEC 60038. This document also applies to battery swap systems supplied from on-site storage systems (e.g. buffer batteries).

What is a lithium-ion battery energy storage system (BESS)?

As the global transition to renewable energy accelerates, lithium-ion battery energy storage systems (BESS) have become critical components in grid stabilization, renewable energy integration, and backup power applications.

How many battery swapping stations can be optimized for 100 EVs?

MILP and queuing theory optimize battery swapping stations. Simulation suggests 16-26 batteries optimize operations for 100 EVs. The proposed approach provides optimal results at 90% utilization. 1. Introduction Global trends are increasingly shifting toward green energy and sustainable transportation to mitigate greenhouse gas (GHG) emissions .
