# **Riyadh Home Solar System Application**

## Overview

---

How much solar power does Riyadh need?

According to the model used in this study, and using the same average electricity price, residential solar deployment in Riyadh would have been around 56.1 MW in 2018. Blazquez et al. (2017) point out that shifting power generation from using oil as fuel to using solar power has a positive impact on the Saudi Arabian economy.

Who can install solar panels in Saudi Arabia?

It is reasonable to assume that only those residents who own their homes would install PV solar panels, given the long maturity time (about 25 years) of such renewable investments. According to the Housing Survey, 56% of housing units occupied by Saudi families are owner-occupied.

Does PV solar technology affect aggregate welfare in Saudi Arabia?

Blazquez et al. (2017) find that PV solar technology has a positive macroeconomic effect on aggregate welfare in Saudi Arabia. Elshurafa and Matar (2017) analyze the cost of solar energy to the Saudi power system. They suggest that PV solar deployment at the utility scale can reduce system costs.

Does Saudi Arabia need a rooftop solar PV system?

A key policy insight from this is that current electricity prices for residential consumption in Saudi Arabia are still too low to incentivize the deployment of rooftop solar PV for economic reasons. However, this does not mean that rooftop PV deployment has to be nil.

## Riyadh Home Solar System Application
