# Should a small flashlight use a storage battery or a power battery

## Overview

---

Should you store batteries inside a flashlight?

Avoid storing batteries inside the flashlight for long periods to prevent leakage. It's essential to match your flashlight with the correct battery size and chemistry. Using incompatible batteries can damage your flashlight or render it ineffective.

Which flashlight battery should I buy?

While alkaline batteries are affordable and easy to find, lithium-ion batteries offer better performance, longer life, and faster charging—making them the top choice for 2025 and beyond. Before you power up, power smart—choose the right flashlight battery.

Are flashlight batteries rechargeable?

Alkaline batteries are among the most common types found in everyday devices, including flashlights. They use zinc and manganese dioxide as electrodes. Typically non-rechargeable, though some rechargeable versions exist. [Lithium vs. Alkaline Batteries: Which Is Better for Flashlights?](#)

Let's compare these two popular flashlight battery types:.

What are the different types of flashlight batteries?

**NiMH Batteries:** Nickel-metal hydride batteries are rechargeable and offer a cost-effective solution for flashlight users. Standard sizes include AA, AAA, C, D, and 9V block batteries. **Other types of flashlight batteries:** This category includes alternative battery options such as 6V and 12V block batteries and the smaller 4LR44, also known as AG13.
