Small container transport from Ecuador to Rong Energy passes through stations

Overview

To correctly estimate both energy consumption and CO2 emissions of hinterland transport, the currently accepted Activity – modal Structure – energy Intensity – emission Factor (ASIF) method needs to be revis.

Can inland waterways be a testbed for oceanic shipping?

For practical deployment, countries with inland waterways may pilot clean energy on inland routes, while others might start along coastal lines. Collectively, this shipping energy choice strategy (see Fig. 3) can serve as testbeds for oceanic shipping, enabling a progressive and effective energy transition. Fig. 3. Shipping energy choice strategy.

Is international shipping a low-carbon energy system?

International shipping, responsible for over 90 % of global trade, also generates significant emission. To meet the emission reduction targets set by the International Maritime Organization (IMO), the development of a low-carbon shipping energy system has emerged as a global consensus.

Why should you use icontainers' ocean freight calculator?

For businesses or individuals looking to ship small parcels or documents by air. In a world where shippers want everything quick and fast, a turnaround time of two days for shipping rates no longer cuts it. iContainers' ocean freight calculator eliminates that problem by providing instant shipping quotes.

Are green container terminals a solution to maritime transport's environmental impact?

To support this swift, green container terminals have emerged as an effective response to cope with the increasing concern over maritime transport's environmental impact.
