

EQACC SOLAR

Small household solar light production plant

Overview

What is a small Solar Home system?

That's the magic of a small solar home system. These compact, affordable setups bring energy independence to tiny homes, remote cabins, rural houses, and even serve as a lifeline during emergencies. If you're tired of rising utility costs, live off the grid, or simply want a sustainable backup, this guide is for you.

What is a small-scale solar system?

Small-scale solar is decentralized power production taken to its extremes. Most of the work in building a small-scale solar system is deciding the size of the components and the building of the supporting structure for the solar panel. Wiring is pretty straightforward unless you want a sophisticated control panel.

How does a small Solar Home system work?

A small solar home system isn't complicated—it's just a handful of parts working together. Here's what you'll find in a basic kit: Solar panel (50W–300W): The heart of the system, soaking up sunlight to generate electricity. Charge controller: Acts like a traffic cop, ensuring the battery doesn't overcharge or drain too fast.

How do I choose a small Solar Home system?

Picking the perfect small solar home system doesn't have to be overwhelming. Here's a simple checklist: Know your wattage needs: List your devices, their watts, and hours of use (like the cabin example). Size your panel: Divide daily Wh by sunlight hours, then add 20% for safety.
