# **Sodium battery energy storage demand in 2025**

## Overview

---

Will sodium-ion batteries hit new heights in 2025?

Expectations for sodium-ion batteries among manufacturers have cooled as LFP prices continue their downward trend, leading to BNEF's lowered expectations for sodium-ion technology to scale. The global energy storage market is poised to hit new heights yet again in 2025.

Will commercial battery deployments overtake residential build by 2030?

Commercial battery deployments overtake residential build by 2030 in BNEF's latest outlook, thanks to updated assumptions on attachment rates, which refer to the percentage of solar installations that are paired with a battery. Lithium iron phosphate (LFP) remains the prevalent lithium-ion battery chemistry in the stationary energy storage market.

Are lithium-ion and sodium ion battery cells cradle-to-cradled energy demand?

This study quantifies the cradle-to-cradle cumulative energy demand of selected lithium-ion and sodium-ion battery cells utilising primary machine data on gigafactory scale. Going beyond previous studies, we analyse the imported and locally required energy demand along Europe's path toward battery self-sufficiency.

What is the future of battery production?

Mining and refining processes for lithium, nickel, cobalt and manganese are projected to account for nearly half of the total energy demand of battery cell production in the initial years, while recycling is significantly less energy intensive.
