# **Solar Base Station Battery Energy Storage Cabinet Installation**

## Overview

---

Do I need a site assessment before installing a solar battery storage system?

Before installing a solar battery storage system, you must conduct a thorough site assessment and energy audit. The site assessment involves evaluating the physical characteristics of your property, such as roof orientation and available space, to determine the feasibility of solar system installation and battery placement.

What is the solar battery storage installation process?

The solar battery storage installation process typically involves an initial site assessment, system design, equipment procurement, installation, and wiring, connection to the solar panels and inverter, testing and commissioning, and finally, system monitoring and maintenance to ensure optimal performance and longevity.

Where are solar batteries stored?

Solar batteries are typically stored in a designated location within a home, such as a utility room, basement, garage, or outdoor enclosure specifically designed for battery storage. The exact placement depends on various factors, including available space, environmental conditions, and safety considerations.

Do I need a permit to install a solar battery storage unit?

The permitting process varies by location, but it will be less cumbersome if you install a storage system as part of your original solar panel installation. Electrical upgrades may be necessary when installing a solar battery storage unit.
