Why did Chinese solar manufacturers show resilience at the 2025 SNEC PV power Expo?

Chinese solar manufacturers showed resilience at the 2025 SNEC PV Power Expo in Shanghai despite a deepening supply glut, as strong demand for energy storage and emerging technologies offset a steep drop in new PV module launches.

Will energy storage capacity expand by 2030?

According to the International Energy Agency (IEA), to meet the increasing global energy demand, storage capacity must expand to 1,500 gigawatts (GW) by 2030. It also projects that 90% of this should come from batteries alone. However, current trends in the energy storage industry are creating a different picture.

What are the most promising battery storage companies in 2024?

The most common way of storing electricity is with batteries. Various technologies are being developed by promising companies, from lithium to redox flow batteries. Let's have a look at four most promising battery storage companies in 2024. 1. Alpha ESS Company Profile.

Will commercial battery deployments overtake residential build by 2030?

Commercial battery deployments overtake residential build by 2030 in BNEF's latest outlook, thanks to updated assumptions on attachment rates, which refer to the percentage of solar installations that are paired with a battery. Lithium iron phosphate (LFP) remains the prevalent lithium-ion battery chemistry in the stationary energy storage market.
