# **Solar Panel Mount**

## Overview

---

What is a solar panel mount?

Solar panel mounts secure solar panels either to your roof or on the ground. Solar panel mounts typically account for 10% of the total solar panel installation cost. IronRidge and Unirac are the best options for roof and ground mount solar systems.

Why do you need a solar panel mount?

The main purpose of a solar mount is to ensure solar systems are properly oriented and fixed either on the ground, rooftops, or other surfaces. Choosing the correct type of solar panel mount is crucial to ensure the structural integrity of your photovoltaic (PV) system.

Where should solar panels be mounted?

The most common locations for mounting are on the roof, using solar roof mounts, or on the ground with ground-mount options. Mounting systems are the metal racks that hold up solar panels either on roofs or on the ground. In terms of cost, mounts and racking typically account for about 10% of the total cost of an average solar system.

What is a solar mounting system?

Modern solar mounting systems consist of roof attachments (with or without flashing), mounting rails, and module clamps. These products are designed to allow workers to quickly and effectively install solar panels that will last for decades on the roof, with minimal effect on the roofing materials and no roof leaks.
