# **Solar Street Light Remote Control System**

## Overview

---

How do solar streetlights work?

For greater flexibility, some solar streetlights combine light and time controls:  
Light Control On + Time Control Off The light turns on at dusk based on light levels but turns off at a scheduled time. Time Control On + Light Control Off: The light turns on at a pre-set time and turns off based on light levels.

Where is the solar street light controller located?

Split-Type Solar Street Lights: The controller is generally housed in the pole. Open the protective cover to access the controller and use the setting switch for manual adjustments. Remote-controlled versions can simplify this.  
Integrated Solar Street Lights: The controller is located in the lamp head.

What is a solar street light?

The solar street light is a lighting system powered by electricity from batteries, which are charged with the use of solar panels. The solar panel consists of crystalline cells. The charge controller ensures the safety of the system, avoiding overcharging or discharging the battery.

How to control solar street light?

You can also control the solar street light to keep 100% brightness for 4 hours after dark. For the rest of the night, set the light keep full brightness when motion is detected, and reduce it to 30% when there is no presence is detected after 30s hold time.
