Solar container communication station flywheel energy storage logo

Overview

What is the Dinglun flywheel energy storage power station?

The Dinglun Flywheel Energy Storage Power Station, the World's Largest Flywheel Energy Storage Project, represents a significant step forward in sustainable energy. Its role in grid frequency regulation and support for renewable energy will help stabilize power systems as China continues to increase its reliance on wind and solar energy.

What is the largest flywheel energy storage system in the world?

Image: Shenzhen Energy Group. A project in China, claimed as the largest flywheel energy storage system in the world, has been connected to the grid. The first flywheel unit of the Dinglun Flywheel Energy Storage Power Station in Changzhi City, Shanxi Province, was connected by project owner Shenzhen Energy Group recently.

What is flywheel energy storage?

Flywheel energy storage is mostly used in hybrid systems that complement solar and wind energy by enhancing their stability and balancing the grid frequency because of their quicker response times or with high-energy density storage solutions like Li-ion batteries .

Where is China's first large-scale flywheel energy storage project located?

China has successfully connected its 1st large-scale standalone flywheel energy storage project to the grid. The project is located in the city of Changzhi in Shanxi Province. The power output of the facility is 30 MW and it is equipped with 120 high-speed magnetic levitation flywheel units.
