Solar double-glass thin-film modules

Overview

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart?

What are double glass solar modules?

What are thin-film solar modules?

Thin-film solar modules transform the renewable energy landscape with their lightweight design, flexibility, and cost-effective production. Unlike traditional silicon-based photovoltaics, thin-film technology enables solar energy harvesting on unconventional surfaces, from building facades to wearable electronics.

What is a glass-glass solar panel?

Glass-glass module structures (Glass Glass or Double Glass) is a technology that uses a glass layer on the back of the modules instead of the traditional polymer backsheet. Originally double-glass solar panels were heavy and expensive, allowing the lighter polymer backing panels to gain most of the market share. Thanks to producers such as:

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

Solar double-glass thin-film modules

Thin Film Photovoltaic Modules

Discover high-efficiency thin-film solar panels for flexible, lightweight, and durable solar solutions. Ideal for RVs, marine use, off-grid systems, and commercial applications. Explore bifacial, ...
