

EQACC SOLAR

# **Solar inverter red exclamation mark**

## Overview

---

The most common reasons for a red light or error code to appear on a solar inverter are overheating, grid failure, or wiring issues. What does a red light on a solar inverter mean?

Seeing a red light on your solar inverter can be a little alarming—but it's not always a sign of something serious. In many cases, it's just your system's way of letting you know it noticed something out of the ordinary.

Why is my SMA inverter showing a red light?

\*Example of an SMA inverter, with error 7702 – this inverter needs to be replaced. If your inverter is showing a red light, start with a Power Cycle: Turn off the AC disconnect circuit breaker supplying power to the inverter. There should be an “AC DISCONNECT” sticker located on the box, typically right next to the inverter.

How do you fix a red light on a solar inverter?

To address the red light issue on a solar inverter, the first task involves conducting a visual inspection of the solar panels for any blockages or contamination that may hinder energy production. Dust, leaves, or other debris can significantly impact functionality, so ensuring the panels are clear and clean is crucial.

Why is my solar string inverter light orange?

Observing an orange or red light on your solar string inverter instead of the usual green can signify a problem. It could be related to varying weather conditions, seasonal changes, or actual system faults like electrical issues, software glitches, or component malfunctions.
