Solar inverter usage

Overview

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

Why do we need a solar inverter?

Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use. Without a solar inverter, the energy produced by solar panels would be largely unusable for standard appliances and electronics. How Does a Solar Inverter Work?

.

What type of solar inverter do I Need?

The type of solar inverter you get installed at your house will be determined by several factors. To guide your solar design decisions, the four key solar power inverter technologies to know are string inverters, microinverters, power optimizers, and hybrid inverters.

How does a solar inverter work?

Most homes and appliances run on alternating current (AC). This is where the solar inverter comes in. Put simply, a solar inverter converts the DC electricity generated by your solar panels into AC electricity that can be used in your household or fed back into the power grid. Without it, all that solar energy would be essentially unusable.
