

EQACC SOLAR

Solar panel direct drive water pump

◆ PRODUCT INFORMATION ◆

-  **BATTERY CAPACITY**
50kWh~500kWh
-  **DC VOLTAGE RANGE**
400V~1000V
-  **DEGREE OF PROTECTION**
IP54
-  **OPERATING TEMPERATURE RANGE**
-10-50°C

Overview

What is a solar drive for water pumps?

A Solar Drive (for water pumps) is a type of electrical converter (essentially solar-powered VSDs) which converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into alternating current (AC) that can be used by a local electrical water pump motor (also still allows for an AC input supply if required).

What is a solar water pump system?

These systems utilize renewable solar energy to pump water, making them an efficient, eco-friendly, and cost-effective solution for regions with unreliable electricity or high energy costs. Here's a detailed guide on how these systems work, the types available, and the benefits they provide.

How to design a solar photovoltaic powered DC Water Pump?

The simplest type of PV system one could ever design is by connecting single or multiple PV modules directly to the DC load as shown in figure 1 below. The overall capacity of the modules is such that it can supply power only during the sunshine hours.

Can a DC Water Pump be connected to a solar panel?

Most common DC water pumps can work directly connected to a solar panel. However, their biggest issue is that they can get stuck. At dawn, the sunlight begins to change from weak to strong, and when the output voltage of the solar panel reaches the starting voltage, the pump will start to work.
