Solar panel integrated

Overview

What are integrated solar panels?

All types of solar panels have become much less bulky – they’re now designed with aesthetics in mind. Integrated solar panels, in particular, can give users the best of both worlds: high efficiency with a sleek, modern look. Want to learn more about these discreet panels?

We’ve got everything you need to know waiting in our helpful guide below.

Are integrated solar panels right for You?

If you come under this bracket, but you’d like to benefit from the cheap, green electricity they produce, then integrated solar panels might be the right option for you. Their sleek aesthetics are the main selling people for homeowners, but you’ll also benefit from a much smaller carbon footprint.

Are integrated solar panels waterproof?

Unlike regular solar panels (also called ‘on-roof panels’), integrated panels need minimal mounting equipment, and the support that is there is hidden out of sight underneath the panels. In-roof panels are also designed to behave like roof tiles – they’re weatherproof, waterproof, and can be as strong as normal roof tiles.

What is the difference between integrated solar panels and solar tiles?

Integrated solar panels sit in the roof covering, but are often the same size as conventional framed solar panels – meaning they’re still visible – while solar tiles are usually the same shape and colour as the tiles they are replacing.
