Solar panel specifications models and brands

Overview

What is a solar panel Directory?

A global solar panel directory with advanced filters that lets you review and compare panels. Pictures, datasheets, PDFs are shown.

What is the power rating of a solar panel?

The power rating of a solar panel, measured in Watts (W), is determined under Standard Test Conditions (STC) at a cell temperature of 25°C and a solar irradiance level of 1000 W/m². However, in real-world conditions, the cell temperature often surpasses 25°C (77°F) depending on the ambient temperature, wind speed, and amount of cloud cover.

How are solar panels ranked?

To rank our solar panels, we primarily looked at power output per square foot. This metric is the best way to directly compare solar panels side-by-side since they can vary so much in size. Solar panels are like most other electronic equipment: They operate most efficiently in cool temperatures (ideally around 25° C or 77° F).

Is SunPower a good solar panel brand?

SunPower SunPower has been a pioneer in solar technology and consistently ranks among the top solar panel brands due to its industry-leading efficiency and unmatched durability. Their Maxeon 6 Series is engineered with next-generation Interdigitated Back Contact (IBC) cells, which eliminate many of the common weak points found in other solar cells.
