

**EQACC SOLAR**

# **Solar panel to power 24v water pump**

## Overview

---

How to connect a solar panel to a water pump?

To connect a solar panel to a water pump, several steps must be followed :  
Before you start connecting your solar panel to a water pump, you need to identify the power requirements of your pump. This information is usually specified by the manufacturer and is measured in horsepower (HP) or kilowatts (kW).

What is a solar water pump system?

A solar water pump system typically consists of the following components:  
Solar Panels: These convert sunlight into electricity. Controller: It regulates the power from the solar panels to the pump. Pump: This is the device that moves water from the source (well, river, or reservoir) to the desired location.

What type of solar panel do I need for my water pump?

For water pumps, monocrystalline and polycrystalline panels are generally recommended due to their higher efficiency and reliability. The power requirement of your water pump is one of the most critical factors in determining the type of solar panel you need. The power requirement is usually measured in watts (W) and depends on factors such as:.

How does a solar water pump work?

Controller: It regulates the power from the solar panels to the pump. Pump: This is the device that moves water from the source (well, river, or reservoir) to the desired location. There are two main types of solar water pumps:  
Submersible Pumps: These are used for deep water sources, such as wells, and are placed underwater.
