

## EQACC SOLAR

**Solar panels are now  
generating the most electricity**

## Overview

---

Which country uses the most solar power?

Although China and the U.S. generate and consume the most solar power, Chile uses the most as a percentage of its total energy consumption. About 7.59% of Chile's total energy consumed in 2022 came from solar power generation.

Which solar technology will generate the most electricity by 2050?

As shown in Fig. 1, by 2050, solar PV technology is projected to have the largest installed capacity (8519 GW), making it the second most prominent generation source behind wind power, and it is expected to generate approximately 25% of total electricity needs by 2050. Table 1. Global installed solar capacity from 2013 to 2022. Table 2.

Will solar power take over the world?

Here is what it will take for us to power the planet on sunshine Is solar power going to take over the world?

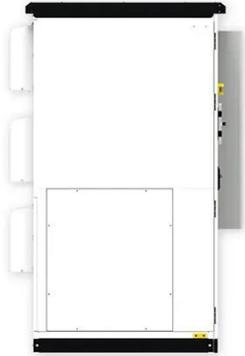

The past few years have seen a frankly astounding acceleration in the rate of its deployment, with total generation capacity doubling between 2022 and 2024 to supply a full 7 per cent of the world's electricity.

Why is solar PV taking over the energy industry?

In all areas: electricity generation growth, installed capacity growth, and cost competitiveness, solar PV domination is now overwhelming. And solar PV takeover is accompanied by the timely meteoric rise of battery storage, which cumulative installed capacity likely overtook that of pumped hydro storage last year.
