Overview

How to wire solar panels together?

The solar panels are to be wired together in series. Be sure to verify the solar panel specification of open circuit voltage measurement (approx. 20VDC). Regulator will measure approx. 40VDC in open circuit. Wire entrance hardware per water tight as required (3 places). 3. Electrical boxes shown with covers removed.

Why do solar panels need to be connected in parallel?

The connection of multiple solar panels in parallel arises from the need to reach certain current values at the output, without changing the voltage. In fact, by wiring several solar panels in series we increase the voltage (keeping the same current), while wiring them in parallel we increase the current (keeping the same voltage).

Should a solar panel be wired in series or parallel?

To solve this problem and to optimize the energy performance of the entire system, it is advisable to wire two panels in series (obtaining a doubling of the voltage) and then wire in parallel the three pairs previously wired in series (so as to have doubled the voltage and tripled the current).
