Solar panels generate electricity for home use

Overview

How do solar panels generate usable electricity?

Solar arrays create a usable electricity system for your home by producing direct current (DC) electricity. This is achieved through the photovoltaic effect, where solar cells convert sunlight into electrical energy.

What is solar energy & how does it work?

Solar energy is a renewable, sustainable, and increasingly popular way to generate electricity for homes, businesses, and off-grid applications. This guide provides an in-depth overview of how solar panels work, the key components of a solar power system, and practical advice on installation, maintenance, and troubleshooting.

How do solar panels work?

Solar panels work by converting sunlight into electricity through a process called the photovoltaic effect. This process produces direct current (DC) electricity, which then needs to be converted to alternating current (AC) electricity for your home to use.

Do solar panels produce more energy than a home needs?

Solar panels can produce more energy than your home needs. In that case, the extra solar energy can be sent back to the utility grid or stored in a battery system for later use. There are three main types of solar power systems: grid-tied, hybrid, and off-grid systems, which we explain in the videos below. How do grid-tied solar systems work?
