

**EQACC SOLAR**

# **Solar power automatic switching system**

## Overview

---

What is a solar automatic transfer switch?

An automatic transfer switch, ATS, does that automatically, in your absence. Read more about the solar ATS below. A solar automatic transfer switch is a type of self-acting switch that is specifically designed for use with a solar power system. Solar ATS are typically installed so they connect to the grid, inverter, solar battery, and the load.

What is an automatic changeover switch for solar PV & inverter?

When adding solar PV and inverters to your power setup, an automatic changeover switch for solar system makes life much safer and easier. It seamlessly shifts between grid and solar power—or solar and inverter—without manual intervention, protecting your equipment and simplifying installation.

Should you invest in an automatic transfer switch for solar power?

Investing in an automatic transfer switch for solar power provides more than just backup power; it creates a smarter, safer, and more efficient energy system. Uninterrupted Power Supply: When the grid goes down, your home keeps running. This is critical for home offices, medical equipment, and sensitive electronics.

How does a solar transfer switch work?

Solar ATS are typically installed so they connect to the grid, inverter, solar battery, and the load. When battery power goes down, the solar transfer switch will automatically connect your appliances to the grid. This ensures your electrical system continues to operate even when there is no solar power available.
