

**EQACC SOLAR**

# **Solar power station for home in Canada**

## Overview

---

Can Canadian homes use solar energy year-round?

When paired with smart storage, solar energy can serve Canadian homes year-round. You store excess power in summer and use it when sunlight is limited. Solar panels collect energy. But what happens when the sun goes down?

Without storage, you send excess power to the grid and buy it back later, often at a higher rate. That's not ideal.

Is solar energy a viable option in Canada?

Solar energy is becoming an increasingly viable option for Canadian homeowners and businesses seeking to reduce electricity costs and minimize environmental impact. With advancements in technology and supportive government incentives, the adoption of solar power in Canada is on the rise.

Why is solar energy so popular in Canada?

Solar energy is becoming increasingly popular in Canada as a sustainable and cost-effective way to power homes. With advancements in solar technology and attractive government incentives, Canadian homeowners are recognizing the benefits of harnessing the sun's energy to reduce their electricity bills and environmental impact.

Is Alberta a good place to install solar panels?

Sunny but cold, Alberta is perfect for **\*\*off-grid solar systems with deep cycle batteries\*\***. Choose kits with solar panel snow load ratings above 5400 Pa and heated battery enclosures. Energy in Quebec is cheaper, but blackouts still happen. **\*\*Hybrid solar power kits\*\*** offer battery backup and grid usage—giving the best of both worlds.
