

EQACC SOLAR

Solar site of Amman New Energy Base

Overview

What is the largest solar energy project in Jordan?

Located east of Amman, Baynouna is the largest single solar energy project in Jordan. The project achieved commercial operation in 2020, and supplies the annual power needs of approximately 160,000 homes, displacing an estimated 360,000 tonnes of carbon dioxide each year.

Can solar power reduce reliance on fossil fuels in Jordan?

The study found that Jordan has a significant potential for implementing solar and wind power, which could reduce the country's reliance on fossil fuels. Bataineh et al. (2014) [125] conducted an optimal design of a hybrid power generation system to ensure a reliable power supply to the health center in Mafraq, Jordan.

How will a solar power plant and a windfarm help Jordan?

The 200MW solar power plant and Masdar's 117MW Tafila windfarm will help Jordan reach its goal of producing 15 percent of its domestic electricity needs from renewable sources. Combined, the two projects account for nearly 18 percent of the 1.8 gigawatts (GW) of renewable energy Jordan aimed to install by 2020.

Is Jordan a good place for solar energy?

They reported that because Jordan is located in the world's solar belt, it receives higher average solar radiation amounts, ranging between 4 and 8 kW h/m² /day, which suggests a capacity of 1400–2300 GW h yearly. As a result, Jordan has a huge potential for solar energy, enabling a large-scale installation of PV projects.
