

**EQACC SOLAR**

# **Somaliland Solar Ecosystem**

## Overview

---

In Somalia, access to electricity impedes economic growth and sustainable development. Despite having abundant solar energy potential due to its location near the equator, the utilization of solar energy is.

How much solar energy does Somalia use?

Based on the current installed energy capacity in Somalia, solar energy contributes approximately 11.9% of total power generation in the country and is expected to increase in the upcoming years.

Can solar energy reduce energy costs in Somalia?

The simulation results using PVGIS revealed that the solar PV installation in Somalia produced two-fold the energy amount compared to PVs installed in Germany. Hence, RE, such as solar energy, can reduce electricity costs and the negative environmental impacts.

Why does Somalia rely on biomass and diesel energy?

Somalia's reliance on biomass and diesel energy sources is due to a lack of infrastructure and access to other forms of energy. This leads to environmental degradation and harm to the country's economic growth and quality of life.

Can Somalia harness solar energy?

This study explores Somalia's energy profile and the potential for harnessing solar energy. The installed photovoltaic capacity was found to be 41 MW and contributed 11.9% of the total electricity generation. A case study on a solar power microgrid system in Bacadweyene, Somalia, is also presented.
