Southern Europe downgrades PV module exports

Overview

Southern Europe's solar export sector faces a downturn, driven by shifting policies, local demand surges, and global competition. Will the EU solar PV market grow in 2025?

The new mid-year solar PV EU market analysis from SolarPower Europe reveals that for 2025, the annual market is expected to contract for the first time since 2015, with a projected -1.4% growth in the most likely scenario. This follows the exceptional annual market expansions in 2022 (+ 47%) and 2023 (+51%), and flattened growth in 2024 (+3.3%).

How much does a solar module cost in Europe?

Producing a solar module in Europe with EU-made solar cells costs around €0.103 (\$0.12)/W more than producing the same module in China, according to a new report.

Will EU-made solar modules be more expensive than Chinese imports?

A report by SolarPower Europe and Fraunhofer ISE finds EU-made solar modules cost €0.103 (\$0.12)/W more than Chinese imports, but targeted policies could close the gap and help reach the EU's 30 GW annual manufacturing target by 2030.

Why is reshoring solar module manufacturing to Europe a problem?

The Reshoring Solar Module Manufacturing to Europe report, by SolarPower Europe and the Fraunhofer Institute for Solar Energy Systems (ISE), says the gap is caused by higher costs for equipment, materials, labour, buildings and facilities.
