

EQACC SOLAR

Spanish off-grid solar power generation system

Overview

How much solar power does Spain have?

Today Spain has 36GW of total solar capacity and the government's target is to reach 76GW by 2030. Spain has limited options for the surplus energy on its hands. Exporting large volumes to the rest of Europe is unfeasible because its grid links to France are limited. So the solution to the glut is storage.

What subsidies are available for solar energy in Spain?

- **Capital Subsidies:** The Spanish government, through programs like the Next Generation EU funds, has provided subsidies to offset the initial costs of installing solar self-consumption. These subsidies have been available for residential, commercial, and industrial sectors, though many concluded by December 2023.

How does Spain support self-consumption solar PV?

Spain has implemented various support measures to encourage the adoption of selfconsumption solar PV systems:

- **Capital Subsidies:** The Spanish government, through programs like the Next Generation EU funds, has provided subsidies to offset the initial costs of installing solar self-consumption.

Is solar mandatory in Spain?

Mandatory solar In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal regulations have been implemented to promote solar energy integration.

Product Model
 HJ-ESS-215A(100KW/215KWh)
 HJ-ESS-115A(50KW 115KWh)

Dimensions
 1600*1280*2200mm
 1600*1200*2000mm

Rated Battery Capacity
 215KWH/115KWH

Battery Cooling Method
 Air Cooled/Liquid Cooled
