St George downgrades PV module exports

Overview

Why are photovoltaic module import shipments not published?

U.S. shipments and sales to the original equipment manufacturer (OEM) for resale and export shipments are not published for certain months to protect individual company data. Table 7. Photovoltaic module import shipments by country Imports at the national level are included in Table 6.

Do I need to report a monthly photovoltaic module shipment report?

Beginning in January 2017, we required some of the respondents for the annual survey Form EIA-63B, Photovoltaic Module Shipments Report, to report monthly data. The subset of respondents now must report monthly accounts for about 90% of photovoltaic (PV) activity in the United States, based on 2021 data.

Is the PV module supply chain undergoing transformation in 2024?

The PV module supply chain is undergoing transformation in 2024, marked by oversupply, policy uncertainty, and low prices affecting manufacturing capacity expansion and factory utilisation rates. Oversupply has been central to the solar supply chain since the second quarter of 2023 but there are signs the trend is shifting.

Does solar PV decarbonise?

As power systems across the world decarbonise, the carbon footprint of PV manufacturing should shrink accordingly. Transporting PV products accounts for only 3% of total PV emissions. Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale.

St George downgrades PV module exports

The shifting sands of PV module supply - pv ...
