# **Tampere Gravity Energy Storage Project in Finland**

## Overview

---

Can a Pyhäjärvi mine be used to build a gravity energy store?

A Scottish company is using the Pyhäjärvi mine to build its first full-scale prototype gravity energy store. One of Europe's deepest mines is being transformed into an underground energy store. It will use gravity to retain excess power for when it is needed. The remote Finnish community of Pyhäjärvi is 450 kilometres north of Helsinki.

Could a Pyhäsalmi Mine be transformed into a giant battery?

An abandoned mine in Finland is set to be transformed into a giant battery to store renewable energy during periods of excess production. The Pyhäsalmi Mine, roughly 450 kilometres north of Helsinki, is Europe's deepest zinc and copper mine and holds the potential to store up to 2 MW of energy within its 1,400-metre-deep shafts.

Will a new mine in Finland use gravity?

It will use gravity to retain excess power for when it is needed. The remote Finnish community of Pyhäjärvi is 450 kilometres north of Helsinki. Its more than 1,400-metre-deep zinc and copper Pyhäsalmi mine was decommissioned but is now being given a new lease of life by Scotland-based company Gravitricity.

What is the Pyhäsalmi Mine?

The Pyhäsalmi Mine, roughly 450 kilometres north of Helsinki, is Europe's deepest zinc and copper mine and holds the potential to store up to 2 MW of energy within its 1,400-metre-deep shafts. The disused mine will be fitted with a gravity battery, which uses excess energy from renewable sources like solar and wind in order to lift a heavy weight.

## Tampere Gravity Energy Storage Project in Finland

### Europe's deepest mine to become giant gravity battery

An abandoned mine in Finland is set to be transformed into a giant battery to store renewable energy during periods of excess production. The Pyhäsalmi Mine, roughly 450 ...
