**Tg backup ups uninterrupted power supply**

## Overview

---

What is a uninterruptible power supply (UPS)?

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes.

What is a Santak ups TG1000?

On sale! The SANTAK UPS Uninterruptible Power Supply TG1000 provides reliable backup power for your sensitive electronics during unexpected power interruptions. With a 1000VA capacity and a built-in battery, this UPS system ensures that your equipment continues to operate smoothly during outages and surges.

What is a ups & how does it work?

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes. A UPS can help prevent power supply problems that can often occur on a production site, such as an instantaneous voltage drop and a power failure.

What happens if a ups fails?

During normal operation, the input power supply bypasses the UPS and is output as-is. During backup operation when a power failure or an instantaneous voltage drop has occurred, the UPS changes to inverter operation with power supplied from its internal battery.
