

**EQACC SOLAR**

# **Thailand Household solar Energy Storage Project**

## Overview

---

Why should Thailand invest in solar energy?

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its decarbonisation goals. While growth has been steady, rapid deployment is needed over the next decade to make longer-term targets attainable.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

How will Thailand's solar capacity grow in 2024?

According to Mordor Intelligence, Thailand's solar capacity is expected to grow from 3.9 GW in 2024 to 5.52 GW by 2029, achieving a compound annual growth rate (CAGR) of 7.2%. The Alternative Energy Development Plan (AEDP) aims to boost renewable energy adoption, supported by: Feed-in tariffs (FiT): Financial incentives for solar producers.

Should Thailand add 32GW of new solar capacity?

Ember calls for Thailand to add 32GW of new capacity to its existing solar deployment targets. Image: Sungrow. Adding 32GW of new solar capacity, plus 15GWh of batteries, to Thailand's power generation deployment targets could cut power generation costs by as much as US\$1.8 billion.

## Thailand Household solar Energy Storage Project
