

**EQACC SOLAR**

**The battery cabinet wake-up power supply has no response**

## Overview

---

Why is my ups battery not working?

If your UPS system's battery is not providing enough runtime during a power outage, this may indicate that the battery is either failing or the load on the UPS is too high. Check the age and condition of the battery, as older batteries tend to provide shorter runtimes.

How do I know if my ups is not going to battery?

how do you know the UPS is not actually going to battery?

you can scale back the amount of alerts you get if you'd like or delay them so that you only get them if the power outage lasts more than a minute, for example.

What if I don't have a charge with a wake-up function?

If you don't have a charge with a wake-up function, you can try a force-charging method. However, this method required close monitoring to avoid overcharging or overheating. Connect the charge to the battery for 5- 10 minutes. Disconnect the charger and measure the voltage using the multimeter. If the voltage exceeds 2/5V, resume normal charging.

What is an uninterruptible power supply (UPS) system?

Uninterruptible Power Supply (UPS) systems are essential for ensuring that critical devices remain powered during power outages. However, like any other technology, UPS systems can experience issues that may affect their performance and reliability.

## The battery cabinet wake-up power supply has no response

### Solved: UPS: On battery power in response to ...

APC UPS Data Center & Enterprise Solutions Forum Schneider, APC support forum to share knowledge about installation and ...

## Unable to wake up BMS!

Unable to wake BMS on 2 12V 100ah WATT Cycle battery. Am using a Haisito 20 amp charger and reads "OFF". When I apply a 12V charge from a Jackery 500 to the terminals ...

### Solved: UPS: On battery power in response to an input power ...
