

EQACC SOLAR

The difference between grid-connected inverter and off-solar container grid inverter

Nominal Capacity

280Ah

Nominal Energy

50kW/100kWh

IP Grade

IP54

Overview

How does an on-grid solar inverter work?

The supply of energy can flow both from the grid to which the user's home is connected and from the user's home to the grid in this system. This characteristic makes the on-grid solar inverter both cost-effective and practical.

What is an off-grid inverter?

Though fundamentally an off-grid inverter, this versatile model features grid input support—allowing it to draw power from the grid when solar and battery resources are insufficient. Commonly known as an off-grid hybrid inverter, it combines solar + battery + optional grid power, ensuring uninterrupted energy supply.

Are hybrid inverters better than off-grid?

Off-grid inverters shine in remote or independent setups, offering full autonomy. Hybrid inverters provide the best of both worlds, suitable for users who need grid interaction but also desire backup power and flexibility. On-grid systems are vulnerable during outages and depend on grid stability.

What is an on-grid hybrid inverter?

This on-grid hybrid inverter is perfect for homeowners or businesses seeking net metering benefits while maintaining power during outages. A grid-tied inverter solely designed for solar-to-grid applications, with no battery support. It provides efficient solar energy conversion and direct grid feed-in but cannot store energy.
