Overview

What is a battery management system (BMS)?

A battery management system (BMS) is an intelligent electronic control unit that monitors, manages, and protects battery packs, primarily evaluating lithium-ion battery systems. Serving as the intelligent interface between battery cells and the electrical system, the BMS ensures safe and efficient battery operation throughout its lifecycle.

What is a multi-master battery management unit (BMS)?

NX-Tech's BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.

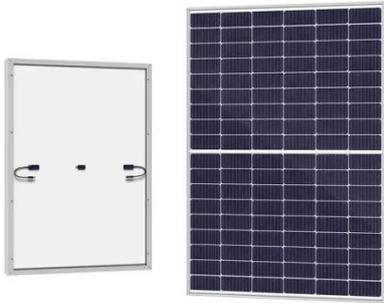

What functionalities can be found in a battery management system (BMU)?

Some other functionalities that can be in the BMU are interlock functionality or the real time clock and vector management system for the software. BMS Software Architecture: The battery management system architecture has different layers that abstract different parts of hardware.

What is a battery management system?

The Battery Management System is a foundational element in any advanced battery-based application. As electrification accelerates, so too must the intelligence and reliability of the systems that control energy flow, safety, and lifespan.
