

## EQACC SOLAR

**The government privately built  
a solar container  
communication station inverter  
and connected it to the grid**

## Overview

---

Are Chinese-made solar inverters a supply-chain vulnerability?

Leading renewable energy operators worldwide are confronting a disturbing supply-chain vulnerability: undocumented communication modules found in Chinese-made solar inverters and batteries.

Where are power inverters made?

Power inverters, which are predominantly produced in China, are used throughout the world to connect solar panels and wind turbines to electricity grids. Credit: Wikimedia Commons© ZME Science.

Are cellular radios soldered to inverter & battery circuit boards?

Confirmed Findings: On , Reuters reported that U.S. energy officials and third-party hardware analysts uncovered cellular radios and other comms modules directly soldered onto inverter and battery circuit boards, features absent from all publicly available specifications (Reuters, May 14 2025).

How do power inverters work?

Power inverters convert the direct current produced by solar panels and wind turbines into the alternating current used by the grid. They're also embedded in home batteries, electric vehicle chargers, and even heat pumps. Because they often require remote updates and maintenance, inverters are designed to be connected to the web.
