

**EQACC SOLAR**

# **The largest solar system in Suriname**

## Overview

---

Rosebel Gold Mine N.V., an IAMGOLD facility, yesterday installed the first panel of what will become the largest solar project in Suriname. What is the largest planet in the Solar System?

Earth is the largest terrestrial or inner planet. Our solar system comprises eight planets, which fall into two categories: the smaller, rocky inner planets (Mercury, Venus, Earth, and Mars) and the larger, gas giants (Jupiter, Saturn, Uranus, and Neptune). Another name for the gas giants is the Jovian planets, for their similarity to Jupiter.

What is the largest natural satellite of Jupiter?

Image: Ganymede is the largest natural satellite of Jupiter and also the largest natural satellite in the solar system. With a diameter of about 5262 kilometers it is the largest object after the Sun and the planets.

What is the largest object after the Sun and the planets?

With a diameter of about 5262 kilometers it is the largest object after the Sun and the planets. It was discovered by Galileo in 1610 and is named after the Greek mythological character Ganymede, who was a handsome young man abducted by Zeus to become the divine cup of Olympus.

How big is our Solar System?

Our Solar System is staggeringly big in human terms. If you look through a small telescope at the bright shape of Saturn, you will see a planet that is well over a billion kilometres away. To travel that distance on Earth, you'd need to go all the way around the globe nearly 800,000 times.
