The world's thinnest solar glass

Overview

What is the world's thinnest glass?

Discovered by accident by scientists at Cornell University and Germany's University of Ulm, the world's thinnest glass is just two atoms thick. It's so thin that its individual silicon and oxygen atoms are visible only via electron microscopy. That ultra-thin glass is now recognized by the Guinness Book of World Records.

What is the thinnest sheet of glass in the world?

A microscopic photo of a sheet of glass only two atoms thick blends with an artist's conception to show the structural rendering. Copy Link URL Copied! A small pane of glass just two atoms thick has entered the 2014 Guinness Book of World Records as the thinnest sheet of glass in the world.

What is the world's thinnest lens?
