Three-phase grid-connected inverter off-grid

Overview

What is a three-phase inverter?

This project focuses on designing and simulating a three-phase inverter intended for grid-connected renewable energy systems such as solar PV or wind turbines. The inverter converts DC power from renewable sources into AC power synchronized with the grid, enabling efficient and stable integration of renewable energy into the electrical grid.

Can a three-phase inverter synchronize with a conventional AC grid?

Integrating these into the conventional AC grid requires power electronics converters, particularly inverters that produce high-quality AC waveforms synchronized with the grid. This project simulates a three-phase inverter topology widely used in grid-tied renewable applications, focusing on efficiency and power quality.

How is a three-phase PV Grid-connected inverter designed?

The three-phase PV grid-connected inverter was designed based on the LQR method, where the tracking error was adjusted to zero through integration (Al-Abri et al., 2024). The disturbance rejection ability of the PV GCI was improved by designing the linear state inaccuracy feedback control policy (Zhou et al., 2021).

Can a three-phase inverter be used in grid-tied renewable applications?

This project simulates a three-phase inverter topology widely used in grid-tied renewable applications, focusing on efficiency and power quality. Design a three-phase inverter that converts DC input to a balanced three-phase AC output. Implement sinusoidal Pulse Width Modulation (SPWM) to control output voltage and frequency.
