Tonga buys UPS uninterruptible power supply life

Overview

Does an uninterruptible power supply represent a significant capital investment?

Because an uninterruptible power supply (UPS) can represent a significant capital investment, it is important to have a general idea of how many years that investment will last.

How long does an uninterruptible power supply last?

Like all other IT equipment, an uninterruptible power supply (UPS) has a finite lifespan. The average expected lifecycle of a UPS is eight-to-ten years. The batteries typically need to be replaced at least three times during that lifespan. Of course, once a UPS reaches the end of its lifespan, it should be replaced to mitigate downtime.

How do you choose an uninterruptible power supply?

When choosing a uninterruptible power supply, IT teams can evaluate two criteria. One is the life of the unit itself – up to ten years. The second consideration is batteries. Every UPS unit has a battery, which as mentioned, must be replaced up to three times.

What are the advantages of a new ups?

Newer UPS models are smaller while offering more power protection. Companies can save anywhere from 1U to 8U of rack space, making it easier to plan future technology deployments. Other advantages of newer uninterruptible power supply models involve sustainability and security. New UPSs are more efficient than legacy models.
