# **Two 50 watt solar panels**

## Overview

---

Can you mix different wattage solar panels?

Then yes, you can mix solar panels that have different wattages. But it is not usually advised because mixing different wattage panels reduces the efficiency and power output. Wattage Mixing Reduces Efficiency and Power A variety of wattage panels has different voltage and amps outputs.

Can a 200 watt solar panel be used with a 100 watt panel?

Let us understand the concept with the help of an example. Have you ever bought a 200-watt solar panel and wondered if it can be used with your old 100-watt panel?

Then yes, you can mix solar panels that have different wattages. But it is not usually advised because mixing different wattage panels reduces the efficiency and power output.

Why do solar panels have different wattage?

If the Solar Panels Have Different Wattage If the wiring of the different wattage solar panels are connected in parallel, if they have similar voltages, efficiency will reduce. If both the series and parallel connections are contained with a diode, it helps in preventing the current. This diode allows the current to flow in a single direction.

How do you wire a solar panel with different wattages?

There are two wiring options when connecting panels with different wattages: series or parallel. Wiring in series means you connect the positive to the negative whereas wiring in parallel means you wire positives together and then wire the negatives together.
