# **Uninterruptible Power Supply in Sao Paulo Brazil**

## Overview

---

Why does Sao Paulo have no electricity?

Water utility Sabesp said in a statement on Thursday that the lack of electricity is already affecting their services too, as pumps are not working adequately. More than 1.4 million Sao Paulo residents had no electricity on Thursday after strong winds caused several trees to collapse onto the Brazilian metropolis' grid the day before.

How bad is Sao Paulo's electricity grid?

The grid's status on Wednesday was even worse, with more than 2 million Sao Paulo residents without electricity. On Thursday, several cars with the Enel logo were filmed in the company's parking lot in downtown Sao Paulo, which further enraged residents and authorities.

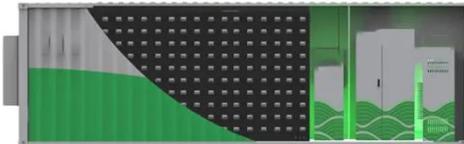

Did wind storms cause power outages in 2023 & 2024?

Damaging wind storms also caused vast power outages in 2023 and 2024, putting utility firm Enel under intense public scrutiny. Enel said gusts of up to 98 km/h (61 mph) battered the region during a 12-hour gale on Wednesday, with impacts lingering into Thursday across the city of 11.5 million people and the wider metro region.
