Uninterruptible power supply 5 4kw

Overview

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is designed to give your computers, servers, server rooms and data centres power in the case of any unexpected energy cut off or in similar applications. These power supply devices contain a battery that guarantees power to your computer system for a certain period of time.

How does a 5V uninterruptible power supply work?

Many commonly available 5V Uninterruptible Power Supplies feature a two chip design with a Li-Ion battery charger to charge the back-up battery, and boost converter to step up the battery voltage back up to 5V. Like most of my personal designs, cost was not a primary driver.

How do I choose an uninterruptible power supply?

To select the right uninterruptible power supply (UPS), calculate the average power required for all connected appliances. For instance, a 350-500 VA capacity is suitable for an LCD monitor or a regular PC.

What is the power factor of an UPS system?

With a 0.9 power factor providing up to 28% more wattage they can power more servers that other UPS in its class. The LCD screen provides clear information on the UPS systems status and measurements on a single screen.
• The UPS system is easy to install in any environment and is available in either rack mount or tower mount options.
