# **Uninterruptible power supply configuration standard for computer rooms**

## Overview

---

What is an uninterruptible power supply (UPS)?

Many businesses opt for an Uninterruptible Power Supply (UPS) for vital backup power when the mains or regular supplier fails. Having an Uninterruptible Power Supply in place and properly set up means, as the name suggests, no interruption in power before your standby generator can kick in.

What is an uninterruptible power supply for server room use?

An uninterruptible power supply for server room use is a backup power solution that kicks in instantly when the main power source fails or fluctuates. It bridges the gap between a power outage and the switchover to a backup generator or safe shutdown.

How can ups harness maximum power capacity within a finite space?

Over the years UPS designers have come up with ways to harness maximum power capacity within a finite space. This is often achieved by scaling the number of UPS systems in a configuration to cope with the; load requirement, budget, existing infrastructure and risk tolerance.

What is a capacity UPS system?

A capacity or 'N' system is the most common type of UPS installation and the minimum requirement to provide power protection to the critical load. Also referred to as 'power parallel', It comprises a single standalone UPS module or a paralleled set of modules with a matched capacity to the critical load projection.

What Size Should A Ups Room be?Where Should An Uninterruptible Power Supply Room be?Ups Room TemperatureThe

most important factor in sizing a room for an Uninterruptible Power Supply is space around the equipment. You need to provide room for air to circulate and ventilation, as well as for manoeuvring around for maintenance and servicing. We'd typically recommend having around 50cm space around the machinery to allow for heat, but in certain circumstances see more on [vitalpower.ukgeant](http://www.vitalpower.ukgeant.com) [PDF]
