# **Uninterruptible power supply first use**

## Overview

---

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a system that provides back-up power in the event of a power failure due to a natural disaster such as a typhoon or lightning strike, or an unexpected accident. Large-scale computers such as cloud systems have become important parts of our infrastructure that support our daily lives and businesses.

What is the history of the uninterruptible power supply?

The uninterruptible power supply has an interesting history and has changed since its first introduction in 1934. Read on to learn more about the history of the uninterruptible power supply. Who Invented the Uninterruptible Power Supply?

John J. Hanley was the inventor of the uninterruptible power supply.

Do you need an uninterruptible power supply?

In conclusion, having an Uninterruptible Power Supply (UPS) is not just a luxury imaginable for tech enthusiasts—it's a necessity for anyone reliant on electricity to maintain productivity, security, and safety. From homes to businesses, the unpredictability of power supply poses risks that no one can afford to overlook.

How does a ups protect a device from sudden power failure?

An uninterruptible power supply (UPS) protects valuable devices from sudden power failures by providing backup power during power outages. This ensures a steady power supply to connected devices.
