

# Unit Price of Wind-Resistant Solar Containers in Southeast Europe

## Overview

---

Which countries benefit most from global solar PV and onshore wind markets?

By comparing capital costs in global market and national market scenarios, this study finds that from 2013 to 2022, experience and knowledge spillover effects from global solar PV and onshore wind markets saved significant costs for three countries, and the United States benefited the most from global markets.

What role does China play in global solar PV & onshore wind markets?

Over the past decade, China has played a key role in global solar PV and onshore wind markets (Helveston and Nahm, 2019). Through large-scale deployments and investments, China has become the leader in solar PV and onshore wind manufacturing.

Does technological learning affect the cost structure of solar PV & onshore wind?

According to reviews on the cost structure of solar PV and onshore wind, this study assumes that the share of capital costs that can be affected by technological learning processes are 57% (i.e.,  $\alpha_i = 0.57$ ) for solar PV and 79% (i.e.,  $\alpha_i = 0.79$ ) for onshore wind (IEA, 2021a, b). 2.4.2. The depreciation rate of knowledge stock.

How much will solar PV cost in 2023?

From 2023 to 2030, benefiting from global solar PV markets, the cumulative cost savings of solar PV in the United States, Germany, and China will be \$48.11 billion, \$8.80 billion, and \$92.73 billion, and the unit cost savings of solar PV in the United States, Germany, and China will be 100.87 \$/kW, 124.08 \$/kW, and 49.23 \$/kW. Fig. 7.
