Ups uninterruptible power supply with power failure notification

Overview

What is a uninterruptible power supply (UPS)?

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes.

What happens when a battery backup uninterruptible power supply detects a power failure?

When the alert module detects a power failure, it notifies you via text message. The battery backup uninterruptible power supply (UPS) (sold separately) continues to provide automatic emergency backup power to your electronic devices giving you time to respond to the power failure.

What is a battery backup uninterruptible power supply (UPS)?

The battery backup uninterruptible power supply (UPS) (sold separately) continues to provide automatic emergency backup power to your electronic devices giving you time to respond to the power failure. This system is stand alone and will work with any Battery Backup Power, Inc. uninterruptible power supply (UPS).

What happens if a ups fails?

During normal operation, the input power supply bypasses the UPS and is output as-is. During backup operation when a power failure or an instantaneous voltage drop has occurred, the UPS changes to inverter operation with power supplied from its internal battery.
