Uruguay outdoor power brand new field

Overview

Las Nutrias is a new Uruguayan power project combining wind and solar technologies, aiming to produce and sell electricity to the grid, with potential agreements with hydrogen and green fuels installations. Does Uruguay have a power grid?

The map of Uruguay's electrical grid today is starkly different from that of 2008, when the majority of power was generated at a few hydroelectric dams north of Montevideo and the rest at a handful of fossil fuel plants in the capital. It's now possible for the entire grid to run several hours a day entirely on wind power.

How many homes can a wind farm power in Uruguay?

In 2011 and 2012, the two leftists watched as onshore wind farm proposals finally poured in at competitive prices. This time around, the tenders resulted in the potential to power nearly 1.2 million homes solely with wind power—nearly every residence in Uruguay.

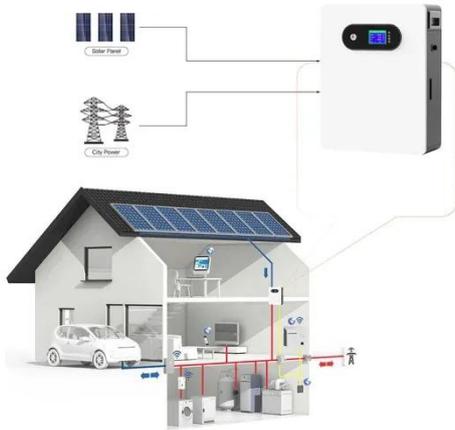

What's new in Uruguay?

But there have been some notable additions. Towering white wind turbines and glistening solar panels are now as much a part of the iconography of Uruguay as the grass itself, though they began to pop up across the country only in recent years, and seemingly all at once.

Should Uruguay transition to renewables?

Since 2019, energy has become a significant export for Uruguay, with some years bringing in hundreds of millions of dollars in revenue. In most of the world, when anyone mentions the need to transition to renewables, climate change dominates the public discussion.
