

## EQACC SOLAR

# Weather station uses photovoltaic container for communication

## Overview

---

How does a photovoltaic weather station work?

The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station. The mounting bracket firmly supports the solar panel to ensure its orientation angle and better receive solar energy.

How does the PV weather monitoring system work?

The PV weather monitoring system can upload data directly to our free environmental monitoring cloud platform via Ethernet. Customers can view data and manage equipment anytime and anywhere through web login or APP. This PV weather station is mainly used for environmental monitoring of photovoltaic power stations.

What is a solar weather station?

PV weather station designed for solar operation. The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station.

How do solar-powered weather stations differ from conventional monitoring systems?

Solar-powered weather stations differ from conventional monitoring systems in several ways: Energy Independence: While traditional stations require connection to electrical grids or frequent battery replacements, solar-powered units generate their own sustainable energy supply.

## Weather station uses photovoltaic container for communication
