West Africa Electrification New Energy Storage

Overview

What are West Africans doing to improve their power systems?

West Africans are now moving in many directions to enhance their power systems. This report offers an overview of the challenges and the great profusion of activity across the region. It should inform conversation at Nigeria Energy in Lagos (19-21 September) and at the Africa Energy Expo in Rwanda next year.

How is West African energy transforming?

The West African energy sector is transforming rapidly with the deployment of large-scale renewable energy capacities, including four 150 megawatt (MW) regional solar parks in Burkina Faso, The Gambia, Mali and Niger. These projects, supported by the World Bank, are part of the ECOWAS Master Plan and aim to achieve a cumulative capacity of 600 MW.

What is the West Africa Energy Program?

The West Africa Energy Program run by US AID's Power Africa division includes support for five solar projects which will provide about 150MW of electricity, including the Kodení and Nagraéongo solar plants in Burkina Faso and a 250MW solar / hydropower hybrid plant in Ghana.

Can integrated power trade save money in West Africa?

The World Bank (2018) estimates that integrated power trade in West Africa could save USD 5-8 billion per year by enabling countries to import electricity at lower cost, thereby increasing access to affordable, reliable and modern energy.
